trustep®
the ultimate toolbox.

THIS IS MY STORY.

Reggie Showers lost both of his legs at the age of 14 from a freak electrical accident. Determined to live his life to the fullest, Reggie's long list of accomplishments include; a two time IDBA Motorcycle Drag Racing World Champion, professional speaker, pilot, rock climber and adaptive snowboard instructor. Reggie is also passionate about being a great father and helping out friends & family with construction projects. Reggie attributes his successes to mentors, determination, hard work and his College Park Trustep feet. Though considered an extreme athlete, Reggie loves the everyday comfort he gets from his Trustep feet.

> *"I'll start my day with a long walk and running errands. After I put my legs on in the morning, I don't take them off until I go to bed in the evening. A lot of that is due to the comfortable fit of my sockets, but a lot has to do with the comfort of my feet as well. I've been told that I have a great gait. As a longtime amputee, I've worn many legs and it hasn't always been like that. I started wearing my Trusteps in 2001 and haven't looked back."*

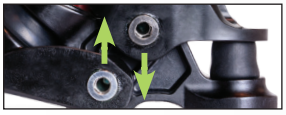
two-time world motorcycle drag racing champion

IS THE TRUSTEP RIGHT FOR YOU?

trustep®

never stop exploring

The first foot designed by College Park over 25 years ago, the Trustep is still unrivaled today. Designed and perfected to provide anatomically correct movement, the foot allows for natural gait and excellent performance in any environment. Providing ultimate comfort yet extremely durable, it's the perfect foot for a wide-range of activities, from standing at work all day to hiking in a park.

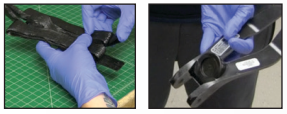


ADAPTIVE TERRAIN COMPLIANCE

Excellent vertical shock and tri-axial motion creates an all-purpose foot for whatever the terrain throws your way.

TRI-AXIAL MOTION

The Trustep moves in all three planes of motion, unlike most feet that only move in two, making it the most anatomical prosthetic foot.



INTELLIWEAVE® COMPOSITE

The Trustep utilizes College Park's patented Intelliweave composite, making it flexible in the right places without losing durability.

TWO GEARS OF RESPONSE

The front bumpers work like gears in a car; when the flexible front bumper reaches max compression during higher activities, the midstance pad engages to provide a firmer response.
